- Please deliver all sessions at Pro Tools Ultimate or 12(.ptx).
- In Pro-Tools, save session as “(Song Title) – Mix PreMix” .
- Delete any unused playlists and remove any unused / unwanted audio files.
- Use SAVE SESSION COPY IN function, and check COPY ALL AUDIO FILES .
- The session has to have all the tracks well named, and all parts of the song marked (ejemp, Verse1, Chorus2, Guitar solo, etc).... and if the session has tracks that belong to a group, please make a group with a non-confuse name .
- For sessions in other DAW: Export all audio files from the exact same starting point. Example: Bar one Beat one or 1:00:00.00, all audio files have to have a non-confuse name.

[By doing so, we can import into Pro Tools without sync issues].

For each song, include a reference mix synced to the prepped session, and the song tempo.

- The reference is very important, and should be a mix everyone is familiar with.
- If there is a blend you have been living with, [ie: a guitar sound between a few mics, bgvs, strings, synths etc] Please include a bounce of it (stereo or mono).

Plug-ins, Automation, FX etc

- Export both a DRY VERSION and WET VERSION (with all automation and FX).
- Keep all active plug-ins, automation and volume levels in the session
- If the plug-in is part of the sound, print it.
- Include comments for alternate / processed / unprocessed tracks.
